#### INTRODUCTION.

In presenting to the American Veterinary Profession, Stock Farmers and others the second edition of our Illustrated Alphabetical Register of Veterinary Instruments, Anatomical Models, Books, etc., we intend to furnish the means of becoming acquainted with the various forms of these goods as manufactured and imported by us. This Register will be found a valuable guide of reference for the selection of articles of above description. In compiling, neither labor, time nor expense have been spared to make it the completest work of its kind published on this continent.

Our stock is larger, more varied and completer than heretofore. It is our determination to have on hand a full supply of all goods mentioned in the following pages; all new and useful improvements will be added thereto, thus enabling the profession to find at our establishment everything requisite for each department of their art. We shall be pleased to have our attention called to new inventions and improvements in Instruments and Apparatus; our personal superintendence will be given to the execution of orders for such as also to all orders large or small for goods as enumerated in the following pages and that we may be favored with. Our prices are as moderate as consistent with the irreproachable quality of the goods (the only quality manufactured by us); and taking this into consideration, will compare favorably with any first class manufacturers in this country.

All of the following articles are of strictly the best quality, made by experienced artisans at our factory and are warranted to give satisfaction.

By constant and careful attention to the production of Instruments of the very best quality and workmanship, we hope to merit a continuance of the liberal patronage and support hitherto accorded us.

Most Respectfully,

No. 303 FOURTH AVE., N. Y.,

JANUARY, 1884.

John Reynders & Co.,

Instrument Makers to the Hospital Department of the

American Veterinary College.

The First Edition of our Illustrated Alphabetical Register of Veterinary Instruments, Anatomical Models, Books, etc., is superseded by this, the Second Edition.

#### SUGGESTIONS TO PURCHASERS;

Intended to facilitate the filling of orders and therefore urgently recommended to your attention.

- 1. In ordering goods by this Register be careful to use the name and number of the article desired as given by us; also state that the selection has been made from the Second Edition of our Illustrated Alphabetical Register of Veterinary Instruments, etc., etc.
- 2. When ordering an article of which different sizes are made, state which size is desired, or measurements.
- 3. Parties finding it more convenient to obtain our instruments through dealers, are requested to order "Reynders' Manufacture" as otherwise inferior goods are frequently substituted.
- 4. Please do not mutilate this book. The enclosure of clippings therefrom will not aid in making the order plainer to us; when our suggestion No. 1 is followed.
  - 5. Any article of other manufacture will be furnished at advertised rates.
- 6. If an article not enumerated in this Catalogue is desired, be particular to give a full description or sketch of the same, or refer us to the Medical Book or Journal, (stating its name, date or number) in which a description can be found. Reference to former correspondence should be avoided as much as possible.
- 7. Write the name of your Town, County and State, and your own name distinctly.
- 8. Remittances can be made without risk by Post Office Orders or Drafts to our order. The sending of money in Registered Letters should be avoided as much as possible, as we will not bear the loss of money when thus sent us.
  - 9. State how you wish your goods forwarded—by mail, express or otherwise.
- 10. Our terms are Cash. Parties ordering goods from us for the first time should remit with the order, or give us satisfactory references as to their reliability.
- 11. To parties unknown to us and who do not furnish satisfactory references, we decline sending goods C. O. D., when the order is not accompanied by a remittance of at least one-third of the value of the article ordered. Such remittance to cover any risk of the goods not being claimed on arrival, and which may have to be returned at the expense of the shipper.
- 12. All packing boxes will be charged for at cost prices, and all goods packed with the utmost care by competent hands. After having received a receipt from transportation companies for the box or package in good order, our responsibility ceases, and they are legally liable for any damage or delay in forwarding goods.
- 13. We are not responsible for goods lost or broken in transit when ordered to be sent by mail.

- 14. Should there be any misapprehension or error on our part in putting up an order, it will afford us pleasure to correct the same; as it is our desire to give entire satisfaction in every transaction.
- 15. Every article sent by us not answering our description or not according to order, will be taken lack without loss to the purchaser.
- 16. We reserve the privilege of changing the prices in this Register, as the fluctuations in the cost of materials and wages may require.

#### SPECIAL NOTICE.

In sending instruments for alteration or repairs, please observe the following provisions governing the mailing of such articles and called Third Class matter.

Postage must be fully prepaid, by stamps affixed thereto, at the rate of one cent for each ounce or fraction thereof.

Packages weighing more than four pounds are not mailable.

All packages must be so wrapped that their contents may be readily examined by Postmasters without destroying the wrapper.

Please do not seal, paste or sew up any package sent to us by mail.

Do not enclose writing in any mail package, but inform us by separate letter or postal card what you wish altered or repaired on the articles mailed to us.

Articles having sharp edges or points, (knives, needles, etc.) as also such composed wholly or in part of glass (Hypodermic Syringes, etc.) must be packed in light wooden or tin boxes with sealed wrappers, and postage prepaid thereon at letter rates. Three cents per half ounce or fraction thereof.

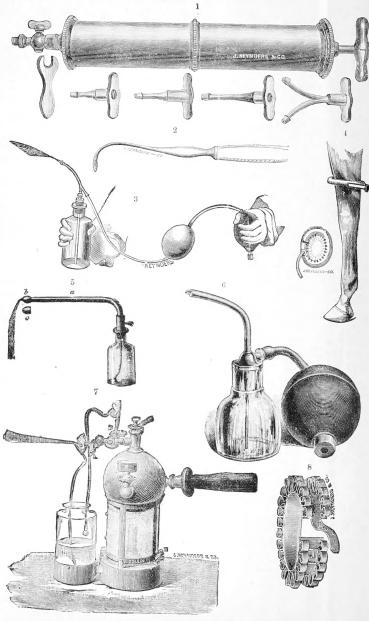

All packages, whether of First or Third Class matter, can be registered for an additional cost of ten cents per package. Greater security in transmission is secured thereby.

All packages or parcels sent to us by mail or express must have the name and address of the sender plainly written on the outside thereof, with the word "From" above the same. This will enable us to return the articles to the proper place and person.

out tubing. Plate 2. Fig. 9		503
Arm Protector, of rubber	3	00

Artery Forceps, plain. Fig. 19.       \$ 1 00         " with rat-teeth. Fig. 20.       1 50         " plain, with spring catch. Fig. 15.       1 75         " with rat-teeth and spring catch.       2 00         " Fricke's, with slide catch. Fig. 18.       2 50
" " with rat-teeth and spring catch
" "Fricke's, with slide catch. Fig. 18
Tricke's, with street cuton. I is 10
" for torsion, with extra long slide catch. Fig. 13 3 00
" fenestrated with spring catch. Fig. 17
" bull dog, with spring catch 2 75
" fenestrated and combined with needle holder. Fig. 14. 4 00
" " Cleborne's. Fig. 16 3 50
Artery Clamp Forceps, straight or curved. Fig. 12 0 70*
" Forceps, with scissor handles and catch. Plate 14.
Fig. 171 2 50
Artery Needle, closing into hard rubber handle, with slide catch. Can
be used also as a dog seaton needle. Fig. 21 3 00
Articulated Fole Hooks, blunt and sharp. Plate 14. Fig. 168each 4 00
Artificial Eyes, glass, of $1^9/_{16}$ , $1^3_4$ and 2 inches diameter. Plate 3. Fig. 27.
each 5 00
" hard rubber, of $1^9/_{16}$ , $1^3_4$ and 2 inches diameter each 4 00
Artificial Hand or Parturition Forceps, E. A. A. Grange's.
Ashton's Full Curved Needle in Handle. Plate 19. Fig. 221
Aspirator, Fitch's "Handy." Plate 3. Fig. 25 5 00
A represents the dome aspirator needle with the cutting point projected ready for punc-
ture. G a magnified diagram of the same after insertion, with the dome advanced so as to protect the interior of the cavity during aspiration; E bulb in upright position to
insure the best action of the valves; CC valves; D entrance tube; E exit tube; FF bits
of glass tubing, through which to observe the passage of the fluid.
Aspirator Trocar and Canula, with stop-cock and Elastic Syringe,
A. Flint's. Plate 3. Fig. 28. With syringe
(From A. Flint's Practice of Medicine, page 163.)
For several years past, in place of the suction pump employed by Wyman & Bowditch, I have used a similar apparatus, namely, a small trocar and canula fitted to screw upon
the flexible suction tube of Davidson's Syringe. The canula should be provided with a stop-
cock. The trocar and canula being introduced within the chest, the trocar is withdrawn and the canula attached to the syringe; the liquid is then removed by means of the
expansion of the India-Rubber suction bulb after its compression with the hand. I have
used this apparatus in many cases with satisfactory results. It has also been used with success by many others.
Aspirator, Peaslee's. Plate 3. Fig. 26. Price with two needles, one
trocar and canula, in case\$15 00, \$17 00 and 21 00
It has a glass cylinder, over which for protection a metal covering is placed, the latter

is open only on one side so the graduations on the piston rod can be seen.

A, instrument,  $5\frac{3}{4}$  inches long; B, gilt tube, 3 inches long, and  $\frac{1}{40}$  to  $\frac{1}{10}$  inch in diameter, with bevelled point; B', similar tube, 4% inches long; C, rubber tube, to be attached to arm a, by which the fluid, drawn from the cyst through a', is forced out. The stopcocks at a and a' are both shown as closed.

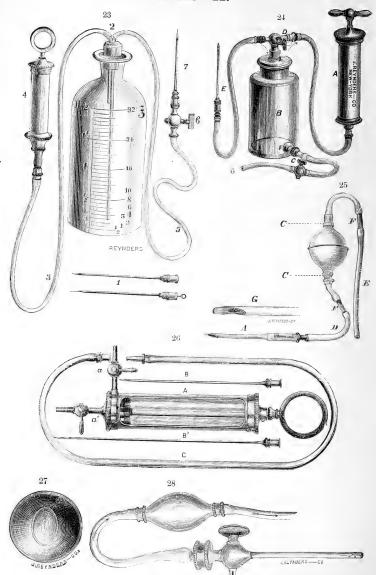

The gilt tubes B, B' are to be adjusted on the conic fitting of the rubber tube C, and the other end of the latter on one of the stop-cocks a' or a.

Aspiration (after insertion of one of the gilt tubes) is made by closing both stop-cocks and drawing the piston back, the latter will retain its position at the upper part of the cylinder by giving it half a turn.

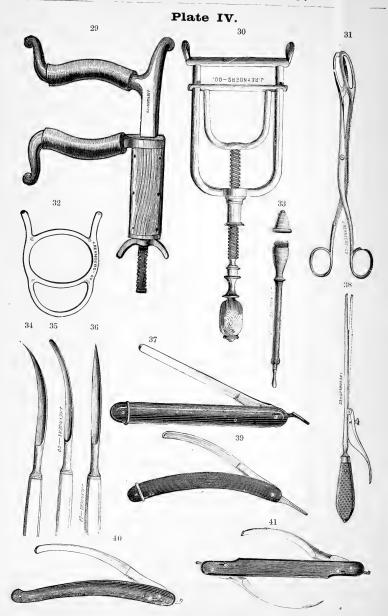

The stop-cock a' (to which the tube is attached) is then opened and the fluid will enter the cylinder, when the latter is filled it can be emptied by closing the stop-cock a', opening a, and pushing the piston forward. After closing both stop-cocks again more aspirations can be made in the same manner.

This instrument can be used for injection as well as for aspiration.

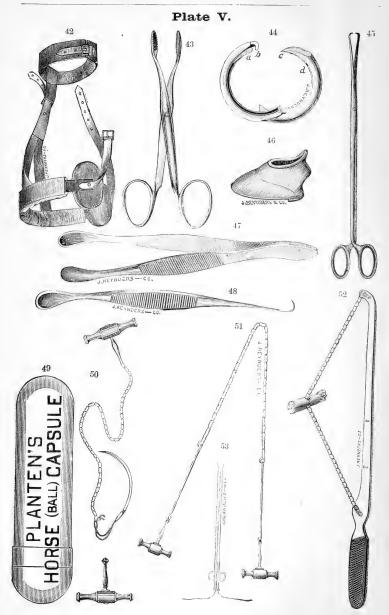

### Plate III.

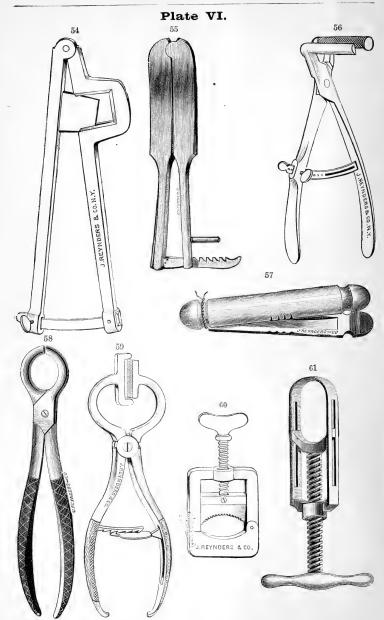

Aspirator, Potain's; with plain aspirating pump, three needles, one tro-		
car and canula, in a neat morocco case. Fig. 23	16	00
The same, with a compound aspirating pump.	18	00
It is reliable in action, of simple construction, and its low price places it within reach of		
every veterinary surgeon.  It consists of a clear glass bottle with a graduated scale showing the amount of fluid con-		
tained, closed by a rubber stopper, through the centre of which two tubes (2) pass, one of the		
latter reaching to the bottom of the bottle.  The short tube communicates by (3) an elastic hose with (4) an exhausting or injecting		
pump (5), another elastic hose which communicates with the long tube in the bottle, the stop-		
cock (6) on to the top of which a capillary tube or trocar is attached.		
We also put with this aspirator a pump with two ends, (marked respectively A and I) by one of which aspiration, and by the other injection can be made, simply by making the con-		
nection with either, as the case may demand. No arrangement of valves is necessary.		
Aspirator, J. Reynders & Co.'s Improved; with plain aspirating pump,		
two needles, one trocar and canula, in a neat morocco case. Fig 24.	16	00
The same, with a compound aspirating pump	20	00
The advantage of this aspirator is compactness. Its bottle is small but nevertheless it is as		
efficient as an apparatus with bottle of any larger size. This is achieved by the hole in the bottle, at $F$ , through which the contents can be emptied most conveniently by opening the		
ston-cock C and removing the fitting D, connected with the pump, from the bottle B. The		
stop-cock at $D$ controls communication from the bottle with the pump as well as through the needle. To exhaust the bottle of air the stop-cock $C$ is closed and the stop-cock at $D$ turned		
as shown in the figure and the numn worked. By turning the stop-cock at D norizontally as		
shown by the dotted lines, communication through the needle to the bottle is established.		
Atomizer, for making applications of spray to sensitive eyes and sores.	_

Capsules for Horse Balls, H. Planten & Son's.		
Ten $\frac{1}{2}$ oz. Capsules, in box. Fig. 49	0	50*
Ten 1 oz. Capsules, in box	0	50*
The superior advantages of these capsules are obvious. The Ball mass is placed into the		
Capsule, (made of Gelatine which is perfectly harmless and immediately dissolved in the stomach) the latter closed by its cap and hermetically sealed, by slightly gumming the		
interior edges of the cap before sliding into position, or by means of the gummed strips of		
paper contained in the box.  The Capsule will not only prevent the Ball from getting dry and hard, but will preserve its		
purity and power for any reasonable time, and ensure the effectiveness of the medicine-		
especially when such drugs as camphor, ammonia, or essential oils are prescribed.

Town to House, note Lorn.	'
Cleborne's Combination Pocket Case Instrument, containing Tenaculum,	
2 hollowneedles for suture wire, and wire twister. Plate 18. Fig. 210. \$7 00	)
Clinical Thermometers, see "Thermometers."	
Clippers, for Two Hands, of Phipp's and Burman's celebrated manufacture.  Their reversible Clippers have two sets of teeth—two Clippers in one. They sharpen themselves while in use. Their plates are reversible. They are regulated and controlled by a single bott and nutacting upon an arched spring. They can be worked backwards. Their parts are interchangeable. They are easily kept in order and easily repaired. They make two patterns:  "World's" and "Appex."	
"World's." Plate 8. Fig. 75. The excellence of the World's Clipper,	
and its superiority over all others are generally admitted. Over 300 horses have been clipped with one of these machines without regrinding	¢.
Arched Spring \$0.15.* Bolt and Thumb Nut 0.25.*	
"Handicap." Plate 8. Fig. 76. The plates and handles of this clipper are secured by separate bolts. The top plate can be removed without disturbing the handles. The "Handicap" has no superior, except the reversibles	
Separate Upper Plate \$1.20.* Lower Plate \$1.30.* Handle (right) \$0.60.* Handle (left) \$0.50.* Arched Cap \$0.25.* Bolt and Thumb	
Nut \$0.20*	
"Albion." Plate 8. Fig. 77. A double screw clipper arranged for the	
use of left-handed men. First class in every particular. It is supplied,	
free of charge, with a wrench fitting accurately the nuts on the bolts. 3 00*	:
Separate Top Plate \$1.20.* Bottom Plate \$1.30.*	
"Peerless No. 3 Toilet." Plate 8. Fig. 78. With exception of the handles which are arranged for use with one hand, this Clipper is similar	
in construction to the Handicap. The handles are moulded to fit closely to the shape of the hand, giving a firm easy hold and avoiding all needless pressure or strain. Polished \$3.50;* nickelplated 4 00* Separate Handle Springs, pair \$0.50.* Other separate parts, the same list as Handicap.	:
"Duplex Toilet." Fig. 73. Reversible, Self-sharpening and Interchange-	
able. With regulator, polished \$4.50.* Nickelplated	
For other Clippers of Phipp's and Burman's celebrated manufacture see Appendix.

Clipping Machines; No. 1, Power Horse Clipper. Page 8. Fig. 8075 00*	
This is the perfection of a Horse Clipper. It combines perfect freedom of motion with extensive range. The connection for conveying power from the boy who turns, to the cutter in the handle is positive, and there is the least possible waste of power. It is easily kept in order. With this machine the purchaser can have a handle with rotary or vibrating cutters, at his choice. The rotary cutter is much the best for shearin the head and legs and works nicely on the body of the horse, but some prefer the vibrating cutter because it cuts faster.	
No. 2. Power Horse Clipper. Plate 8. Fig. 81	

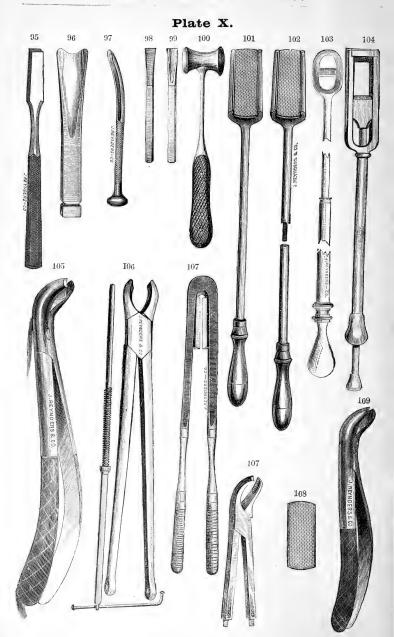

No. 3. Power Horse Clipper. Fig. 82	35	*00
This machine is the same size and has the same range as No. 2. It has vibrating cutters. It will be seen by the cut that the power is conveyed from the balance arm to the handle by a belt, which is not quite as convenient, but will do just as good work and just as fast as any other form of the machine.  This machine has the adventage of being noiseless.		
Clipping Machines; No. 4. Power Horse Clipper	50	*00
This machine is driven by compressed air, and consists of an air pump, a rubber hose eight feet long and a handle with an air engine in it. It has circular vibrating cutters. Although turning somewhat harder than Nos. 1, 2, or 3, it is preferred by some to any other. Its range is extensive, and it is noiseless.		
No. 6. Power Sheep Shearing Machine	50	00*
This is the only reliable sheep shearer that has ever been thrown upon the market. It gives great satisfaction to all who use it enough to become familiar with it.  An expert will shear ten sheep an hour, easily, as sheep are shorn in New England. Of course the question of speed in shearing involves the condition of the sheep and the experience of the shearer.  This machine is also used for shearing pelts, both fresh and dry. It cuts the wool of equal length and if properly used never clips the wool the second time. Indeed prominent manufacturers say that the wool is worth at least one cent a pound more if cut by this machine than it is when cut by common shears.

This has been devised with a view to obviate all difficulty in administering fluid medi-		
cine to horses and cattle. It consists of two compartments A and B; B communicating		
with the metal tube B and A with the soft rubber hose A. The vessel B is to hold the medicated fluid and A luke warm water, which may be filled in through C. The soft		
rubber hose A is introduced into one of the nostrils and the metal tube B into the		
mouth; the horn is then to be tilted upwards, when the water will enter the nostril, force the animal to swallow and take the medicine without difficulty.

#### Dressing Materials.

#### Absorbent Cotton.

Our Absorbent Cotton is put up in neat and substantial boxes (where it may be kept in a compact and clean condition until used up) in such sizes as will be found convenient for its various uses, as follows

(a) in bales of	$25 \text{ lbs} \dots \text{per lb}.$	\$1	00	(d)	) in	\frac{1}{8} 1b.	poxe	$\mathrm{s.,per}$	, pox	\$0	39

(d) in  $\frac{1}{4}$  " .... " 0 50

Hygroscopic Cotton Waste (for use in dispensaries), etc.....per box 1 00
This cotton prepared from the best material, for use as a surgical dressing, commends

itself on account of its purity uniformity of texture, and its property as an absorbent.

It absorbs fluids with great rapidity, and is therefore especially adapted for use as surgical dressing, for local application of medicated solutions, and as a substitute for sponge

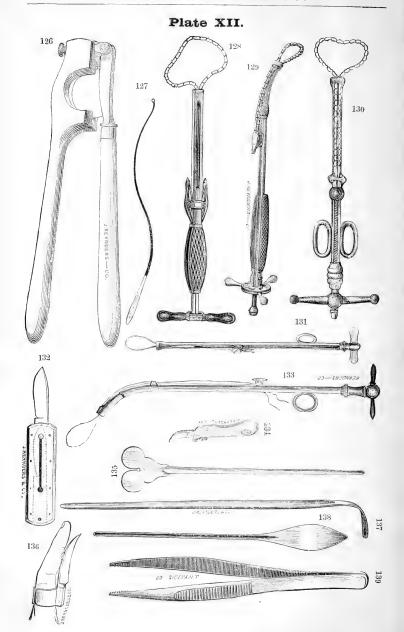

in surgical operations.

It is perfectly pure, having been carefully and thoroughly cleansed from oil, resin, and all extraneous matter.

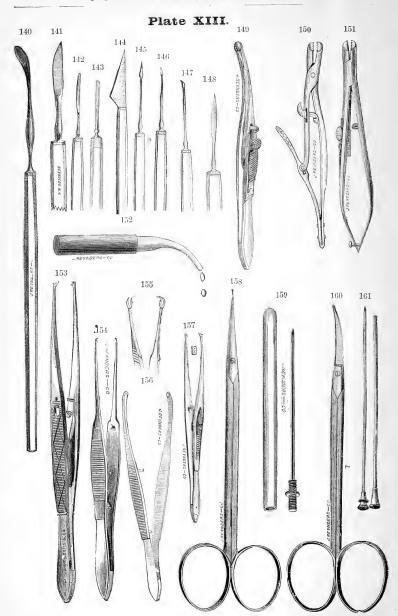

It is uniform in texture, free from threads and knots, and felting together of its fibres make it preferable to scraped lint for many surgical purposes; and it is endorsed by every intelligent practitioner who has used it.

This has been devised with a view to obviate all difficulty in administering fluid medicine to horses and cattle. It consists of two compartments A and B; B communicating with the metal tube B and A with the soft rubber hose A. The vessel B is to hold the medicated fluid and luke warm water which may be filled in through C. The soft rubber hose A is introduced into one of the nostrils and the metal tube B into the mouth; the horn is then to be tilted upwards, when the water will enter the nostril, force the animal to swallow and take the medicine without difficulty.

Microscopes, Zentmayer's American Student Stand, with 1 eye-piece
(A or B); $\frac{8}{10}$ objective, $24^{\circ}$ ; $\frac{1}{5}$ objective, $75^{\circ}$ ; and walnut case, with
lock and handle. Plate 16. Fig. 189
With 1 eye-piece, and walnut case with lock and handle
This instrument was designed and constructed with the view of enabling students to obtain
an instrument combining the essential features of a first-class stand, superior optical quali- ties and extremely low cost.
The instrument is of brass, with the exception of the base, which is of cast-iron, neatly
japanned. The base is the same shape as that of the Histological Stand, being of one piece and very rigid, to which the bell-metal bar is attached by a joint, allowing the use of the
instrument at any angle of inclination; perpendicular and horizontal positions being indi-

instrument at any angle of inclination; perpendicular and horizontal positions being indicated by stops.

The coarse adjustment for focus is accomplished by sliding the body-tube in a cloth-lined outside tube, which give an exceedingly smooth and delicate movement.

The fine adjustment is of the same style as that of the American Centennial Stand. A concealed lever is acted upon by a micrometer screw, and moves the entire body, which is fitted # to the grooved bar, giving steady and delicate movement.

The plane and concave mirrors are hung in a plane with the object, and may be swung over the stage for illuminating opaque objects (instead of the bull's-eye condenser), having the object as the centre.

The stage is broad and firm, is only three (3) inches from the table, and is provided with delicate spring-clips, which may be removed if desired.

The diaphragm is circular in form, with a series of different size apertures, and is let into the stage from above; it may also be removed.

	scopes, Zentmayer's American Histological Stand, with following coessories: 1 eye-piece ( $\Lambda$ or $B$ ); ${}^{8}_{0}$ -inch objective, $24^{\circ}$ angular	
	perture; \(\frac{1}{2}\)-inch objective, $75^{\circ}$ angular aperture (which easily resolves	
ar	perture; 4-men objective, 15 angular aperture (which easily resolves	
P.	P. Angulatum), and neat walnut case, with lock and handle\$50 0	0*
Witl	th same accessories, but with addition of rack and pinion, instead of	
	liding tube for coarse adjustment. Plate 16. Fig. 188 58 0	0*
Sam	ne, but with binocular attachment and 1 pair of eye-pieces 80 0	0*
	th sliding tube coarse adjustment, 1 eye-piece and walnut case 32 0	
	th rack and pinion coarse adjustment, 1 eye-piece and walnut case. 40 0	
	ocular, with 1 pair of eye-pieces and walnut case	

The fact that microscopical investigations have become obligatory in many of our Universities and Colleges, has necessitated the construction of an instrument combining the facilities of a first-class Stand, superior optical qualities and moderate cost. These necessary requirements were held in view, and, we believe, have been fulfilled in the above-named Stand.

The entire instrument is made of brass. The base and uprights are one piece, of a peculiar shape, of great rigidity, to which the bell-metal bar is attached by a joint, allowing the use of the instrument in any angle of inclination; perpendicular and horizontal positions are indicated by stops. The coarse adjustment is accomplished by a sliding tube, or by rack and pinion; the tube is five and one-half inches long, capable of elongation to the standard length.

The fine adjustment is of the same style as the one of the American Centennial Stand. A concealed lever is acted upon by a micrometer screw and moves the entire body, which is fitted to the grooved bar, giving a steady and delicate movement. The arrangement of the swinging sub-stage and mirrors is the same as in the United States Army Hospital Stand.

The removable sub-stage carries the diaphragms, which can be shifted up close to the object.

The stage is a modification of the glass stage, and consists of a glass bar kept down by two spring clips against which the object rests. By this method the object may be moved in the latitude, and the longitudinal movement is accomplished by hand. The spring clips may be used independently for holding anything in a fixed position, by simply placing them in the extra holes provided for that purpose. The stage is only three (3) inches from the table when in a horizontal position.

Winnerson Edmod: 1 6 77 11 1	40 00*

An admirable instrument, giving a flat though small field, great magnifying powers, clear definition, and is quite achromatic, i. e., without those fringes of rainbow coloring which are always seen surrounding the objects in inferior microscopes.

It is furnished with one eyo piece and a series of three object glasses, namely: the inch, half inch and quarter inch, so made that in order to obtain the highest power, all that is needed is to employ all the three, which screw into each other; two giving a less power, and one the least of all. The convenience of this arrangement will be readily understood.

Objectives of any manufacturer can be screwed into the tube of the instrument, as the latter contains the thread of the society screw.

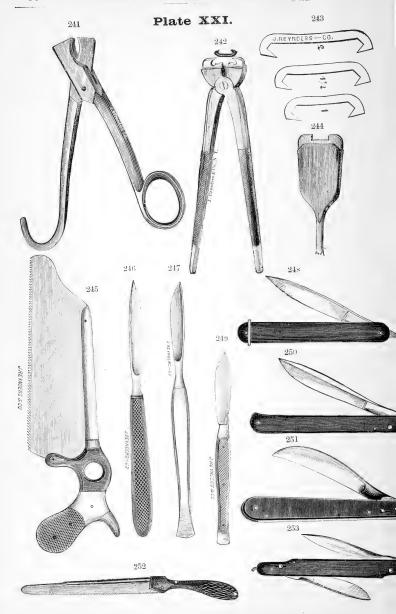

The body of the instrument turns on two pivots so as to suit the position of the head, coarse and fine screws permit quick or slow moving of the tube to and from the object For conveniently moving the object is provided a sliding stage, with a revolving diaphragm secured under the same.

A dissecting forceps, animalcule cage, or life box, and condenser, accompany this instrument. All fitting in a neat mahogany case with handle on its top.

A drawer fitted with racks for holding microscopic objects is also contained in the case.

### Microscope Objectives, of Mr. Wm. Wale's celebrated manufacture.

## 

It is known that platinum and some other metals possess the property, when slightly heated, of becoming incandescent when brought in contact with a gaseous mixture of air and of certain hydrocarbon vapors, and of continuing in an incandescent state without flame as long as the mixture continues to be supplied. It is upon this property that Dr. Paquelin has based the construction of his novel and very admirable apparatus.

The thermo-cautery consists of three principal parts, namely: The chamber D or E in which the combustion takes place, the receptacle A for the volatile hydrocarbon, and the air blowing contrivance (set of double bulbs) C. The combustion chamber (E or D) is the cautery itself. The latter consists of a platinum shell of small volume and large surface, it is the cautery proper, becoming incandescent and is made of two forms to suit different requirements of application. Two tubes are attached to this, an inner one for leading the vapors into the platinum shell and an outer one for conducting off the products of combustion.

The receptacle A consists of a bottle, having fastened to its neck a contrivance for readily attaching the bottle, as is most convenient, to a button hole, button or pocket of the operator's clothing. This bottle is closed by a rubber stopper through which a tube having two outlets passes. Through one of the latter and by means of the set of double bulbs C is forced into the bottle: atmospheric air, which passes out through the other outlet mixed with the hydrocarbon and into the cautery D or E. A handle G made of non heat conducting material is attached between the cauteries D or E and the rubber conducting tubing. F is a tube that can be screwed between the cauteries D or E and the handle G, elongating the instrument for operating in cavities.

#### DIRECTIONS FOR USE.

The set of double bulbs C, are attached to the blow pipe fastened on to the alcohol lamp B, and the end bulb worked briskly whilst the cautery to be used (attached to the handle G, and tubing to the receptacle A), is held into the white part of the flame until the cautery has become slightly heated. Then remove the cautery from the flame and the set of double bulbs from the blow pipe and attach the latter to the inlet tube of the receptacle. Again work the end bulb briskly until the cautery has become incandescent and then operate. During the operation continue to work the end bulb with the left hand, sufficiently for retaining the cautery at a uniform degree of heat. The cautery when incandescent will remain so, as long as hydrocarbon is supplied by working the bulb.

The thermo-cautery is applicable in all operations where the use of cautery by fire is indicated. Its heat may be maintained indefinitely, and may be varied at the will of the operator, at any degree lower than that of white heat. It may be passed through the organic tissues and liquids, or even through cold water without losing its activity. It is easy of manipulation, perfectly safe in use, compact, portable, and free from the inconveniences of the older methods of cautery by fire. The hydrocarbons which supply it (keroseline or benzine) are everywhere easily obtained.

Hollow suppositories are being welcomed as a great boon to man's most faithful and	. 00
patient servant—the horse. Most of the diseases from which he suffers are soonest relieved by rectal medication. It only requires a minute to fill a No. 6 hollow suppository and insert it; and the life of the animal often depends on prompt action. Not only should every veter- inary surgeon keep a supply of these hollow suppositories on hand ready for immediate use, but every person owning a horse should do so. The sickness to which the horse is most liable is colic. One of these suppositories filled with wet tobacco and inserted will generally cure the sufferer in a few minutes. The same treatment will destroy "pin wornsy" in horses.

[From Ganot's Elementary Treatise on Physics," Article 294.]

"Thermometers, even when constructed with the greatest care, are subject to a source of error which must be taken into account: this is, that in the course of time the zero tends to rise, the displacement sometimes extending to as much as two degrees; so that when the thermometer is immersed in melting ice, it no longer sinks to zero. This is generally attributed to a diminution of the volume of the bulb and also of the stem, occasioned by the pressure of the atmosphere."

Statistics show that several thousand thermometers of refined construction, and graduated on the stem to 0°, 2 Fahrenheit or thereabouts, are annually procured by the medical practitioners of our country for physiological researches and daily practice. The majority of these thermometers are newly made (within six months), and their verification depends on inferior (from the scientific standpoint) thermometers in the hands of individual makers. It is needless to say that the readings of such thermometers have little value in indicating the true temperature of a patient, or affording data in cases which the physician wishes to describe in print. An analysis of the results of sixty-eight thermometers of this description, verified by the Thermometric Bureau of the Winchester Observatory, in June, 1880, will show how great this error may come to be: one-fifth had errors less than 0.1°; one fifth had errors less than 0.4°, but more than 0.2°; two fifths had errors less than 0.7°, but more than 0.4°; one-fifth had errors less than 1.0°, but more than 0.7°; and occasionally a thermometer was found which had errors exceeding 1° and more rarely one exceeding 2°. The thermometers on which the above deductions rest were chosen to represent seven makers, and may be fairly taken to indicate the liability to error in using clinical thermometers, which have not been compared with authoritative standards. It is not unlikely that members of the medical profession have been sometimes misled by the readings of inaccurate thermometers and may have made unfavorable statements regarding the chances of recovery of patients whose temperatures were high.

The Thermometric Bureau at the Winchester Observatory, of Yale College (from whose official circular and an article published by Dr. L. Waldo, in the Popular Science Monthly for January, 1881, the above was copied), has been established by the Corporation of Yale College, at the recommendation of the Board of Managers of the Winchester Observatory, in order to afford desired facilities for the adequate verification of thermometers.

Thermometers are received by the observatory for the purpose of comparison with the observatory standards, and certificates of comparison signed by the Astronomer in charge are issued with thermometers so compared. These certificates contain a statement of the corrections to be applied at intervals of five or ten degrees of the thermometer scale to cause it to have the same reading as the observatory standards. In general these corrections will be expressed in tenths of one degree.

able to all so-called "varranted correct" or "tested" (the latter when unaccompanied by a certificate of either of these observatories), as such statements are unreliable, and therefore not as desirable as a TRUE statement of diversions.

# Description of the New Set of Instruments for Closing Quarter and Sand Cracks in Hoofs.

Our attention has recently been called by Mr. Reynders, Surgical Instrument maker, of 363 4th Ave., to an improved engage and in the horse's hoof. The drawing will indicate the form of the apparatus, which consists essentially of two parts; an instrument for comparing the hoof—a powerful pair of forceps for compressing the ends or points of the clamps into the hoof. Punctures on each side of the crack in the

wall of hoof are effected by the active at red heat, to a sufficient depth to insure secure hold of the clamp, which, by means of the forceps, is first pushed firmly into the punctures made by the cautery, and then the ends of the clamps are carefully compressed by the forceps, using no greater force than the animal will bear without pain. We have used these clamps in a number of cases with complete such as the support of the support of

# Enumeration and Contents of Cases.

In the following pages we enumerate and describe cases, etc., as kept in stock by us; we will make to order any style, containing any combination of instruments desired.

### DISSECTING CASES.

Dissecting Case No. 2, contains: 2 ass. scalpels, 1 tenaculum, 1 cartilage knife, 1 dissecting forceps, 1 scissors, 1 set of hooks on chain; in a mahogany case.

Price, ebony handled instruments, §4 00; ivory handled instruments... §4 50
DISSECTING CASE No. 3, contains: 4 ass. scalpels, 1 tenaculum, 1 cartilage knife,
1 dissecting forceps, 1 scissors, 1 blowpipe, 1 set of hooks on chain; in
mahogany case.

Price, with abony handled instruments, \$5.50; ivory handled instruments, \$6.25
Dissecting Case No. 4, Charrière's, contains: 4 scalpels, 1 tenaculum, 1 cartilage knife, 1 scissors, 1 dissecting forceps, 1 blowpipe, 1 set of hooks on chain; in a zinc case, black oil cloth covered.

Price ...... instruments ebony handles, \$7 50; ivory, \$8 50

### HOOF CASES.

Hoof Case No. 1, contains: 3 single-edged drawing knives of assorted sizes, 1 sharp pointed double edged sage knife, 1 reamer, fitting into one handle with spring catch; in wrapper case. Plate 9. Fig. 92.

Medicine Chest and Instrument Case Combined, Prof. A. Liautard's, contains: 6 two-oz. glass stoppered bottles, 2 glass jars for ointments, 1 balling iron, 1 elastic catheter.

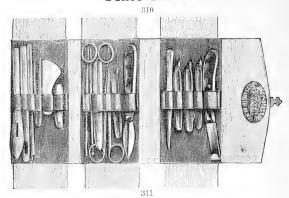

(27)...5.50

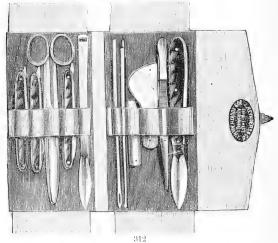

In drawer B: 1 single edged sage knife, right, 1 single edged sage knife, left; 1 sharp pointed double edged sage knife, 1 single edged drawing knife for searching, 2 double edged drawing knives of assorted widths of curve; all in ebony handles, French model; 1 plaster spatula.

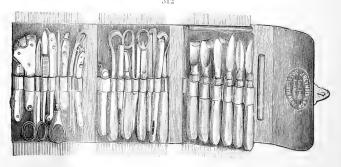

In Drawer A: 1 scalpel, straight edge, closing into hard rubber handle, with slide catch; 1 scalpel, convex edge, closing into hard rubber handle, with slide catch; 2 assorted lancets, 1 coecum trocar, 1 dog seaton needle, closing into hard rubber handle, with slide catch; 1 plain artery forceps, 1 grooved seaton needle, separating into two parts; 1 curved on flat seissors, 1 director, 1 porte caustic, 1 hard rubber syringe, with cone fitting into the canula of the coecum trocar; put up in a strong wooden case, covered with black calf-skin, having a handle on the top of the cover. Plate 27. Fig. 309.

### POCKET CASES.

### Plate XXVI.

Pocket Case No. 2, three-fold, American model, contains: 1 scalpel, straight edged; 1 scalpel, convex edged; 1 bistoury, curved, sharp pointed; 1 bistoury, curved, probe pointed; 1 tenaculum;—all closing into plain hard rubber handles; 1 lancet; 1 fleam, two blades; 1 drawing knife, single edged; 1 sage knife, sharp pointed, double edged; 1 scaton needle, separating into three parts; 1 scissors curved on flat; 1 dressing forceps, with scissor handles; 1 artery forceps, plain; 1 probe, separating into two parts; 4 needles, and silk. Fig. 310.

Pocket Case No. 3, three-fold, English model, contains: 1 scalpel, 1 bistoury probe pointed; 1 aneurism needle, 1 tenaculum, 1 castrating knife, 1 drawing knife, single edged—all closing into horn handles with springs; 1 fleam, two blades; 1 scissors, straight; 1 seaton needle, in protecting horn handle; 2 lancets, assorted; 1 director and scoop; 1 plaster spatula; 1 rowling scissors; 1 dressing forceps, with scissor handles; needles and silk.

Pocket Case No. 4, two-fold French model, conntains: 1 scalpel, convex edged, closing into handle, with slide catch; 1 fleam, two blades; 1 scissors, curved on flat; 1 artery forceps, plain; 1 director, with myrtle leaf; 1 seaton needle, separating into two parts; 1 lancet, 1 drawing knife, double edged; 1 sage knife, sharp pointed, double edged; 1 drawing knife, single edged; needles and silk.

Price.....\$20 00

POCKET CASE No. 5, two-fold, with pressed leather frame, French Model, contains:

1 bistoury, straight, sharp pointed; 1 scalpel, convex edged; 1 sage knife, single edged;—all closing into handles, with slide catches; 1 fleam, two blades; 1 artery forceps, plain; 1 drawing knife, double edged, in ebony handle; 1 lancet, 1 scaton needle, separating into three parts; 1 director, with myrtle leaf; 1 scissors curved on flat; suture pins, needles and silk.

POCKET CASE No. 6, three-fold, French model, contains: 1 castrating knife, 1 scalpel, convex edged; 1 bistoury, straight, sharp pointed;—all closing into handles with slide catches; 1 fleam, three blades; 1 scissors, curved on flat; 1 artery forceps, plain; 1 director, with myrtle leaf; 1 dressing forceps, with scissor handles; 1 caustic holder, with silver burner; 1 scaton needle, separating into three parts; 1 drawing knife, double edged; 1 drawing knife, single edged; 1 sage knife, sharp pointed, double edged; 1 sage knife, single edged, right; 1 sage knife, single edged, left; 2 lancets, assorted; needles and silk.

PGENET CASE No. 7, three-fold, French model, contains: 1 castrating knife, 1 dog seaton needle, 1 bistoury, straight, sharp pointed; 1 bistoury, straight, probe pointed, with extra long shank; 1 scalpel, convex edged;—all closing into handles with slide catches; 1 fleam, 3 blades; 1 scissors, curved on flat; 1 coecum trocar, 1 seaton needle, S form and grooved; 1 artery forceps, plain; 1 director, with myrtle leaf; 1 caustic holder, with silver burner; 2 retractors, 1 bistoury, straight, sharp pointed, in ebony handle; 1 dressing forceps, with scissor handles; 1 bistoury (neurotomy) curved,

probe pointed, in ebony handle; 1 seaton needle, separating into three parts; 3 drawing knives, double edged, of assorted widths of curve; 1 sage knife, sharp pointed, double edged; 1 sage knife, single edged, right; 1 sage knife, single edged, left; 3 lancets, assorted; needles and silk. Fig. 312.

POCKET CASE No. 8, Gerlach's, contains: 2 suture needles, assorted; 1 tenaculum; 1 bistoury, curved, probe pointed; 2 scalpels, convex edged, of assorted sizes; 2 bistouries, curved, sharp pointed, of assorted widths; all fitting into one handle, with spring catch. In wrapper case.
Price
POST MORTEM CASES.
Post Moetem Case No. 1, contains: saw, chisel and stilet fitting into one handle 1 cartilage knife, all steel; 1 cartilage knife, extra heavy; 3 ass. scalpels 1 tenaculum, 1 dissecting forceps, plain; 1 dissecting forceps, extra long; 1 enterotome, 1 costatome, 1 straight scissors, 1 steel mallet, 1 rachitome 1 blow pipe, 1 set of hooks on chain, 1 brain knife, needles and linen thread: in a mahogany velvet lined case.
Price
Post Mortem Case No. 2, contains: 1 Finnell's saw and knife, fitting into one handle; 1 cartilage knife, all steel, 3 ass. scalpels, 1 tenaculum, 1 chisel, plain; 1 rachitome, 1 steel mallet, 1 enterotome, 1 scissors, 1 plain dissecting forceps, 1 blow-pipe, 1 set of hooks on chain, needles and linen thread; in a rosewood case.
handle; 1 cartilage knife, all steel, 3 ass. scalpels, 1 tenaculum, 1 chisel, plain; 1 rachitome, 1 steel mallet, 1 enterotome, 1 scissors, 1 plain dissecting forceps, 1 blow-pipe, 1 set of hooks on chain, needles and linen thread;
handle; 1 cartilage knife, all steel, 3 ass. scalpels, 1 tenaculum, 1 chisel, plain; 1 rachitome, 1 steel mallet, 1 enterotome, 1 scissors, 1 plain dissecting forceps, 1 blow-pipe, 1 set of hooks on chain, needles and linen thread; in a rosewood case.  Price

IMPROVED SADDLE BAG:

Is the best and neatest bag ever offered to the profession. It has metal boxes covered with the best of well-tanned leather, firmly rivetted together with copper rivets, and finished in the neatest manner. There is not one stitch of sewing on the entire bag; it has no straps or buckles to loosen; also, no drawst of pull out, and gives the least strain on the lock of any bag ever made. It has nickel-plated trimmings; the bottles have acid proof rubber corks, and are separated from each other by leather partitions. (They are made in two styles, black and russet.)

## Auzoux' Anatomical Models.

(Anatomie Clastique.)

OF

### DOCTOR AUZOUX, PARIS.

Extract from the Official Programme of the French University for 1849.

"The instruction in physiology and in the natural sciences would not accord with the views of the university if the professors should not sustain their lectures by continued illustration with objects of nature contained in the museums and with the detailed models of Dr. Auzoux."

The word "clastic" is derived from the Greek "Klao"—signifying to break or separate—that is to say, anatomical models, composed of solid pieces, that can be readily taken apart and put together; one part resting upon the other as in a veritable dissection.

The models are made of papier-maché; chewed or mashed paper mixed with size or glue, which, when newly composed, is run into moulds, wherefrom it takes the most delicate impressions. When thoroughly dry a remarkable degree of lightness and elasticity, combined with a degree of strength equal to that of wood, is acquired by this material.

These clastic models of animal anatomy, issued by Dr. Auzoux, of Paris, have been universally accepted as a chef-d'œuvre in this department of scientific illustration, that it seems quite unnecessary to say any words in their praise. No similar models have ever been undertaken giving the same abundance of detail or possessing the same exquisite excellence and beauty of execution. They are largely distributed through university museums and the schools of medical science and anatomical study throughout all Europe. In America they are favorably known in a few of our higher institutions, which are so fortunate as to possess some portions of the series.

Orders sent to us will be promptly attended to, and the objects obtained from Paris (where we have an agent who gives our orders his personal attention) at the earliest moment, and with the least possible expense for transportation. It must be stated that the time necessary for filling an order by Dr. Auzoux (owing to the great call for these models) is very considerable. Therefore application should be made at the earliest possible date.

Of the following list of Dr. Auzoux's models, those marked by a star\* are usually kept in stock by us, all others are imported to order only.

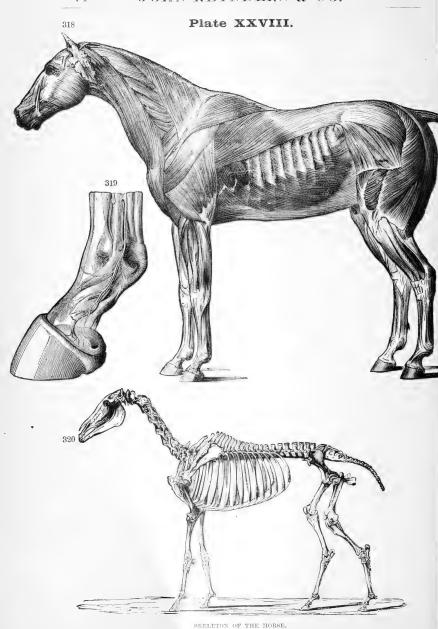

Orders for the latter must be accompanied by a deposit equal to  $33\frac{1}{3}$  per cent of their value, such remittance to cover any risk of the models not being claimed upon arrival.

On arrival the models are sent C. O. D. for the balance due.

When ordering, please quote as ordering from the Second Edition of J. R. & Co.'s Alphabetical Register of Veterinary Instruments, Anatomical Models, etc.

JOHN REYNDERS & CO.,

No. 303 Fourth Ave., New York.

Price . .

			-
34.	Arab Horse. Fig. 318. Complete (4 feet 3 inches high), exhibiting in detail more than 3,000 objects separating into 97 pieces; showing on one side the superficial muscles, nerves, and vessels; on the other, the same removable separately, as in a dissection, from the superficial layer to the skeleton; in the splanchnic cavities are found all the organs contained therein, which also may be removed and studied separately. This model of the horse, which leaves nothing to be desired has been adopted by the French cavalry corps, veterinary and agricultural schools. It has also been purchased by several foreign governments as an efficacious means of popularizing the ideas of anatomy and physiology necessary for the amelioration of the equine race, and for the choice, employment and preservation of the horse		00*
35.	The same, less complete, showing on one side the muscles, nerves and vessels of the superficial layer; on the other, the middle layer and the organs in their respective cavities, separately removable as in the complete model		
36.	Stand, spatula, descriptive pamphlet, and case for the above  Thirty Maxillae, or Jaw Bones, displaying correctly the age of the horse at every period of life, with examples of such malformations as may make the horse appear older or younger		00*
37.	Plate, displaying in relief the shape and organization of all the teeth of the horse.		00*
38.	Fourteen Maxillae, or Jaws, of an Ox, displaying correctly the age	•	00*
39.	at various epochs of life		00*
<b>4</b> 0.	Leg of a Horse, divested of the skin, showing diseased bone; not detachable	20	*00
41.	The same, with examples of bony diseases		00*
42.	Leg of a Horse in a healthy state, covered by the skin	20	00*
43.	Bones of the Leg of a Horse, 12 distinct bones, each separately removable	20	00*
44.	Flesh Diseases of the Horse; the leg divested of the skin m one-half its extent, the skin preserved in the remainder, with instances of soft swellings, windgalls, capped hock, etc	20	00*
	Foot of a Horse, showing the disposition of the hoof, the "podo-phillic" tissue, the vessels, nerves, etc. (all parts being removable)	28	00*
45. I	3is* The same, with the hoof, separating after the manner of Bracy Clark; showing groove intended to receive the shoe of Charliers pattern.  *Model of Normal Horse's Foot, made of plaster-of-paris. Fig. 319		00* 00*

46.* Horse's Hoof, separable, according to the plan of Bracy Clark, interest.	)	
the wall sole, frog, and periopole		00*
46. Bis* The same, illustrating the shoeing of Charlier	14	00*
47. Bony Pelvis of mare	. 20	00*
48. Uterus of Mare, empty, with internal and external appendages, Fal	-	
lopian tubes, ovaries, etc., the whole fitting into the pelvis	. 31	00*
49. Uterus of Cow, empty, with its appendages	. 31	00*
50. Uterus of Cow, with the product of conception at the 4th month.	. 39	00*

#### COMPARATIVE ANATOMY.

This series of models has been made to show the operation of the principal functions of life throughout the entire series from man to zoophyte; and makes readily appreciable the differences presented in the structure and the use of the various organs of digestion, respiration, circulation and the nervous system of mammals, birds, reptiles, fishes, insects and molluses.

Descriptive Price List of the above series mailed upon application.

### SKELETONS.

Skeletons of animals of all classes and orders throughout the entire vertebrate series. These are beautifully and scientifically prepared, and are furnished and mounted on pedestals or disarticulate, as may be desired.

Descriptive Price List mailed upon application.

velopment, physiological relations, anatomy, microscopical character,		
pathology and dentistry, with a vocabulary of the medical and tech-		
nical words used. Revised and enlarged edition	9	00
		00
"The chief improvements (not to mention the minor ones) are an appendix of 60 printed and illustrated pages. The first article in the appendix is on Fossil Horses, and describes among		
others the earliest form, Phenaculus, which possessed five toes on all its feet. Its teeth were		
discovered 12 or 15 years ago, but its skeleton was not found till the summer of 1881. The feet of the 5-toed, 4-toed, 3-toed and 1-toed specimens (the latter, of course, being the modern horse)		
are illustrated side by side, as are, also, the teeth. Other articles, entitled, "The Views of an		
Evolutionist," "The Original Home of the Horse," "Elephant Tooth Germs," and "Human		
Teeth," follow. Elephant molars (four in all), which in the full-grown animal weight from ten to fifteen pounds each, are, also, described; they are cut and shed from five to six or seven		
times during life, and at comparatively regular periods, even after the 100th year. Instead of		
erupting under the old teeth, they move horiz intally, like the bullets in a repeating rifle. An		
almost exhaustive index and several pages of "Public Opinion" follow the appendix, the volume closing with illustrations of the age of horses from one year to twenty-nine, and nearly		

all the dental instruments.

"Many of the plates of the first edition have been revised, and some are new, or nearly new.

Of the latter, page 74 gives additional facts about the grinders, and 209 about the dentinal star

(both illustrated); 215 gives a valuable extract from Brandt's "Age of Horses," and tells, what		
Aristotle, Xenophon, Pliny and other ancients say about the teeth as indicators of age; 114		
describes the teeth of two fossil birds, and the title page now gives a better idea of the scope of the book. An error on page 31 has been omitted; a wild statement about glanders, by C. D.		
House, on page 199, is replaced by a fresh note. The vocabulary has been freed of several		
errors, and, as a whole, has been considerably modernized."

J. Woodroffe Hill, F. R. C. V. S. This is undoubtedly the most com-		
prehensive work on the subject of cattle and their diseases. The		
book, while of a thoroughly standard character, is yet written so that non-professionals may obtain a practical knowledge of the diseases		
attending the bovine stock, and the most intelligent method of treat-		
ing them.  The scope of the work comprises an introductory chapter on Health		
and Disease; a chapter on Diseases of the Heart and its Membranes;		
one, Diseases of the Pespiratory Organs; Diseases and Injuries of the		
Blood Vessels; Dentition, Diseases of the Teeth, Jaws, Tongue and		
Mouth; of the Stomach; of the Bowels; of the Liver and Spleen;		
of the Urinary Organs; of the Generative Organs; Anatomy and		
Physiology of the Cow; Parturition; Diseases of the Feetus; Mon-		
strosities; Diseases and Abnormalities of the Young Animal; Dis-		
eases immediately connected with Parturition; Diseases and Abnorm-		
alities of the Mammary Gland and Teats; Diseases of the Nervous		
System; of the Eye and Appendages; of the Ear; of the Skin; In-		
ternal Parasites, Blood and General Diseases; Accidents and Opera-		
-		
tions; Poison and Antidotes. Octavo, 664 pages, with 153 illustrations on wood and 19 full page		
colored plates. Cloth	10	00

12mo, paper	\$0	50
Extra cloth		75
The value of the most of horses to their owners is measured by the amount and length of service that can be secured, and, therefore, all information relative to his care is very important. We have here in a condensed form much that is valuable on the care of horses, that has not before been published. The subject is considered from a new and original stand-point, and stated in a plain, practical, common-sense manner, showing how by proper care we may add many valuable years of life and usefulness to our horses. It discusses very fully the best means of putting horses in "condition" and keeping them so, the relation of feed to work, the best kinds of feed, and when and how to feed for the best results, including the care of work horses and of road horses. Tells how Mr. Bonner and others care for their valuable stock and keep them always in condition, and at less cost for feed than is usual with farmers and others. The causes of the various diseases to which he is subject, with methods of treatment, are given. The question of shocing is fully considered, different ways are considered, and it is shown how under many conditions horses will do better service without shoes than with them, and Col. M. C. Weld, who is well-known authority, adds a valuable chapter giving his experience with carefoot horses. There is, also, an illustrated chapter on the "Signs of Character" and training of horses. It is safe to say that to every owner of a horse this book would prove invaluable.		
PECK. Classifications of the Muscles of the Horse. This is a large chart,

pages	1	25
Marsh. Section Cutting. A practical guide to the preparation and moun-		
ting of sections for the microscope; special prominence being given		
to the subject of animal sections. By Sylvester Marsh, M.D. Re-		
printed from the London edition. With illustrations, 12mo, cloth,		
gilt title	0	75
This is undoubtedly the most thorough treatise extant upon section cutting in all its de-		
tails. The American edition has been greatly enlarged by valuable explanatory notes, and also by extended directions, illustrated with engravings for selecting and sharpening knives		
and razors.		
MICROGRAPHIC DICTIONARY. A guide to the examination and investigation		
of the structure and nature of the microscopic objects. By J. W.		
Griffiths and Arthur Henfrey. 845 pages, illustrated by 48 plates		
and over 800 engravings. Fourth edition. London 1883	91	00
Phin. How to Use the Microscope. A simple and practical book, in-	41	00
tended for beginners. By John Phin, editor of <i>The American</i>		
tended for beginners. By John Finn, editor of The American		
Journal of Microscopy. Second edition, greatly enlarged, with 50		
illustrations in the text and 4 full-page engravings printed on heavy		
tint-paper. 12mo, neatly bound in cloth, gift title	0	75
Phin. A Book for Beginners with the Microscope. Being an abridg-		

ment of practical hints on the selection and use of the microscope.		
By John Phin. Fully illustrated, and neatly and strongly bound in		
boards	\$0	30
This book was prepared for the use of those who, having no knowledge of the use of the microscope, or, indeed, of any sientific apparatus, desire simple and practical instruction in		
the best methods of managing the instrument and preparing objects.		
Richardson. Hand-book of Medical Microscopy. 40 illustrations. By		
J. G. Richardson, M.D.	2	25
Ross. The Microscope. By Andrew Ross. Fully illustrated. 12mo,		
cloth, title	0	75
This is the celebrated article contributed by Andrew Ross to the Penny Cyclopædia, and quoted so frequently by writers on the microscope. Carpenter and Hogg, in the last editions of their works on the microscope, and Brooke, in his treaties on natural philosophy, all refer to this article as the best source for full and clear information in regard to the principles upon which the modern achromatic microscope is constructed. It should be in the library of every person to whom the microscope is more than a toy. It is written in simple language, free from abtruse technicalities.		
SLACK. Marvels of Pond Life. Second edition, with colored plates and		
numerous woodcuts	2	00
SMITH. How so see with the microscope. Being useful hints connected		
with the selection and use of the instrument; also some discussion		
of the claims and capacity of modern high-angled objectives, as com-		
pared with those of medium aperture. With instructions as to the		
selection and use of American object-glasses of wide apertures. By		
J. Edwards Smith, M.D., Professor of Histology and Microscopy;		
corresponding member, San Francisco, Dunkirk, and other micro-		
scopical societies, etc. Handsomely illustrated	2	00
Prof. Smith is well-known as the most expert manipulator in this country, as regards objectives of wide aperture, and in this volume he gives, in a clear and practical manner, all the directions necessary to attain the surprising results which he has achieved. No microscopist that uses anything better than French triplets can afford to be without it.		
Suffolk. On Microscopical Manipulation. Being the subject-matter of a		
course of lectures delivered before the Queckett Microscopical Club.

## Appendix.

Castrating Instrument, C. B. Halstead's Patent. Plate 29, Fig. 335....\$10 00% Cautery Iron with platinum points. Plate 30, Fig. 337 ..... 10 00 Clippers, for two hands, of Phipp's & Burman's celebrated manufacture.

Have handsomely ebonized handles, neat stout leather pockets as per Fig. 327, Plate 29, are packed in substantial boxes and each one is accompanied by a certificate of genuineness bearing fac-simile of the manufacturer's signature. Broken parts can be duplicated.

Clippers and Repairs can be sent by mail, the postage being about as follows:

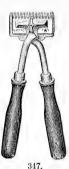

CLIPPERS:—Toilets, 15 cts.; others 20 cts.

Repairs:—Plates, 4 cts. each. Toilet Handles, 5 cts. each; other Handles, 6 cts. each. Bend Or Arched Cap, 4 cts.; other Arched Caps or Springs, 3 cts. each. Bolt and Nut, 1 ct. Toilet Handle Springs, 2 cts. per pair. Wooden Handles, 2 cts. Pocket, 2 cts. Oil Can, 2 cts.

Greater security in transmission is secured by Registration at an additional cost of ten Cents per package.

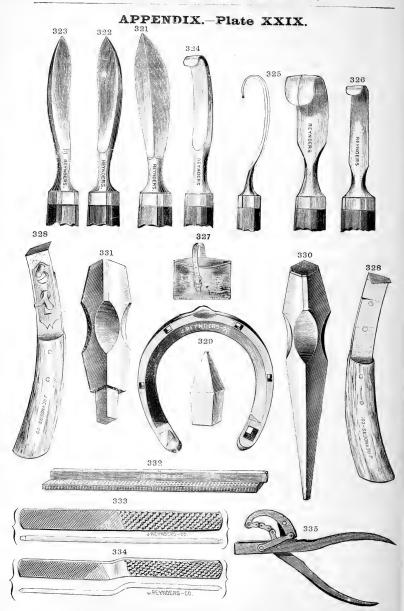

"Apex." Fig. 345. This Clipper is reversible and constructed upon the same principle as the "World's." See page 19. Its plates can be reversed or removed without separating the handles. It is provided with a shield which protects the row of teeth not in use and can be adjusted to either row, in an instant, by simply slacking the fly nut. We consider the "Apex" the height of perfection...... 4 50\*

Separate parts, the same list as "World's," see page 19.

"Bend Or." Fig. 346. This Clipper is a modification of the Handicap. The chief difference is in the arched cap extending back over the plates and carrying the pin upon which the right handle works. The whole machine can be taken apart by unscrewing the fly nut. This Clipper has been extensively imitated.....

Separate Arched Cap \$0.40.\* Other separate parts, the same list as "Handicap," see page 19.

"Empire." Fig. 347. A new Clipper of simple but substantial and

effective construction. The arched cap and left handle are in one piece. This Clipper is made under special contract, and is fitted and finished in the best manner. Its name, "Empire," is a trade mark, \$3 00\*

Separate left handle \$0.60; other separate parts, the same list as "Handicap," see page 19.

350. 349.

"Foxhall." Fig. 348. This Clipper is made under special contract, and its name is a trade mark. It is offered at a very low price, but is strictly first-class in all respects. The cutting plates are of the finest steel, thoroughly tempered. They will hold their edge and bear resharpening as well as the highest priced Clipper in the market. All of the bolts are fitted with fly nuts, so that the pressure can be regulated or the entire machine taken apart without use of a wrench. With light colored handles..... 2 50\*

Separate Top Plate, \$1.10\*; Bottom Plate, \$1.25\*; Right Handle, \$0.50\*; Left Handle, \$0.50\*.

"Newark." Fig. 349. This is a new machine. The left handle expands into a broad arched cap to which the plates and right handle are attached by separate bolts. Both plates can be removed by unscrewing the flynut, without separating the handles. The handles are heavily plated with gun metal, protecting them from rusting, and giving them an attractive appearance. This Clipper will be found 

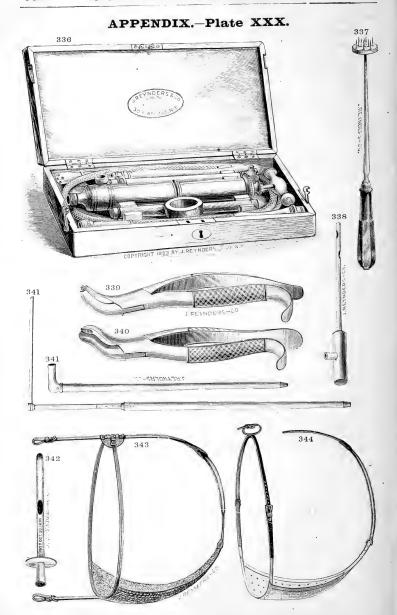

Separate Right Handle, \$0.80\*; Left Handle, \$0.90; other separate parts, the same list as "Handicap," see page 19.

Prince of Wales." Fig. 350. This is a handsomely finished Clipper which has proven a great favorite in the English market. The plates are adjusted by brass fly nuts instead of the ordinary hexagon nuts, thus dispensing with a wrench. The handles are heavily plated, 

Separate Top Plate, \$1.20\*; Bottom Plate, \$1.30\*; Right Handle, \$0.60\*; Left Handle, \$0.60.\*

Wooden Handles, for any of the above named Clippers, plain, each, \$0.12\*; ebonized, each, \$0.20\*. Leather Pocket, \$0.25\*; Pocket Oil Can, \$0.15\*.

For other Clippers of Phipps & Burman's celebrated manufacture, see page 19.

which is pointed and tempered at one end (that which comes into contact with the ground or ice) and flat at the other end. This fits, into a similar-shaped hole at the extremity of each branch of the shoe, and, if thought necessary, in the middle or at each side of the toe.  "This hole should be very slightly tapering from the lower to the upper (or toot) surface, and it should be of such a size that the square stud will require a slight tap or two to make it fit in tightly, yet without projecting at all beyond the level of the foot-surface of the shoe. I was at first in doubt as to whether the studs would remain in during work, or while the lorse was standing in the stable; but, to my surprise, they were firmly retained in the shoes for a month, though subjected to every kind of test except on ice, which the season has not afforded.  "A few blows on each side are sufficient to stacken them, when they require to be removed as no longer necessary, when worn out, or when they require to be re-sharpned, we should not be shorted to the stable of the same thickness throughout, there is little risk of their breaking. It would be advisable, It links, to have the shoes a little thicker and broader at the places where the holes are to be made. I anticipate that this mode of rendering all kinds of horses efficient during frost will be found eminently successful and very inexpensive, and one readily carried out anywhere in a very short time."
